A blue-tinted anatomical illustration of a human torso, showing the skull, neck, ribcage, and spine, serving as a background for the left side of the slide.

# Actualizing the Untapped Potential of the Innate Immune System

Affimed's Approach to Advancing Immuno-oncology

A photograph of a scientist in a white lab coat working in a laboratory. The scientist is looking down at a piece of equipment, possibly a microscope or pipette, with a focused expression.

June 2020

# Forward-Looking Statements / Cautionary Note

This presentation and the accompanying oral commentary contain “forward-looking” statements that involve substantial risks and uncertainties. All statements other than statements of historical facts contained in this presentation and the accompanying oral commentary, including statements regarding our future financial condition, business strategy and plans and objectives of management for future operations, are forward-looking statements. In some cases, you can identify forward-looking statements by terminology such as “believe,” “will,” “may,” “estimate,” “continue,” “anticipate,” “intend,” “should,” “plan,” “might,” “approximately,” “expect,” “predict,” “could,” “potentially” or the negative of these terms or other similar expressions.

Forward-looking statements appear in a number of places throughout this presentation and the accompanying oral commentary and include statements regarding our intentions, beliefs, projections, outlook, analyses and current expectations concerning, among other things, the value of our ROCK® platform, the safety and efficacy of our product candidates, our ongoing and planned preclinical development and clinical trials, our collaborations and development of our products in combination with other therapies, the timing of and our ability to make regulatory filings and obtain and maintain regulatory approvals for our product candidates, our intellectual property position, our collaboration activities, our ability to develop commercial functions, clinical trial data, our results of operations, cash needs, financial condition, liquidity, prospects, future transactions, growth and strategies, the industry in which we operate, the trends that may affect the industry or us, impacts of the COVID-19 pandemic and the risks, uncertainties and other factors described under the heading “Risk Factors” in Affimed’s filings with the Securities and Exchange Commission.

Forward-looking statements involve known and unknown risks, uncertainties, assumptions and other factors that may cause our actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. Forward-looking statements represent our management’s beliefs and assumptions only as of the date of this presentation. Except as required by law, we assume no obligation to update these forward-looking statements publicly, or to update the reasons why actual results could differ materially from those anticipated in the forward-looking statements, even if new information becomes available in the future.

Every Patient Deserves More Options. Every Patient Deserves Another Chance.

---

*The first patient to receive AFM13 to treat CD30+ lymphoma with cutaneous presentation*

# Leading Innate Immune Cell Activation to Treat Cancer Patients

Innate Cell Engagers (ICEs) have large potential to revolutionize patient response in hematologic and solid tumors

## Innate Immune System is Key to Advancing I-O

- ✓ The Innate immune system is inherently powerful yet largely overlooked
- ✓ Improve efficacy, tolerability and potential to treat previous non-responders to SOC
- ✓ Large opportunity with high unmet medical need

## Late Stage with Broad Pipeline, wholly owned and partnered

- ✓ AFM13: novel approach for CD30+ lymphoma; in registration-directed study
- ✓ AFM24: first ICE for solid tumor in clinical-stage; broad opportunity
- ✓ RO7297089: partnered; poised to enter clinic
- ✓ AFM28 & AFM32: programs initiated

## Industry Leading ROCK® Platform

- ✓ ROCK® Platform produces diverse ICEs for a multitude of cancers
- ✓ Proven ability to rapidly and predictably build potent and stable ICE; customizable to specific tumor targets
- ✓ Monotherapy and combinations

## Partnerships and Collaboration

- ✓ Multi-program strategic partnership with Genentech
- ✓ Several ongoing collaborations; opportunities for additional

## Strong Leadership and Cash Position

- ✓ Recent CSO and CMO appointments strengthen depth and breadth of industry experience
  - ✓ Funded at least into the First Half of 2022
  - ✓ Multiple value inflection points in 2020 and 2021

# Experienced Management Team

Proven track record in biotech, pharma, product development, and finance

**Dr. Adi Hoess**  
Chief Executive Officer (CEO)

Extensive background in general management, product commercialization, fundraising and M&A

**Dr. Arndt Schottelius**  
Chief Scientific Officer (CSO)

Broad experience in biotherapeutics R&D and I/O & immunology research and development

**Dr. Wolfgang Fischer**  
Chief Operating Officer (COO)

In-depth expertise in R&D with a focus on oncology, immunology and pharmacology

**Dr. Andreas Harstrick**  
Chief Medical Officer (CMO)

Seasoned oncology expert with broad experience and proven track record of bringing innovative therapies to the market

**Denise Mueller**  
Chief Business Officer (CBO)

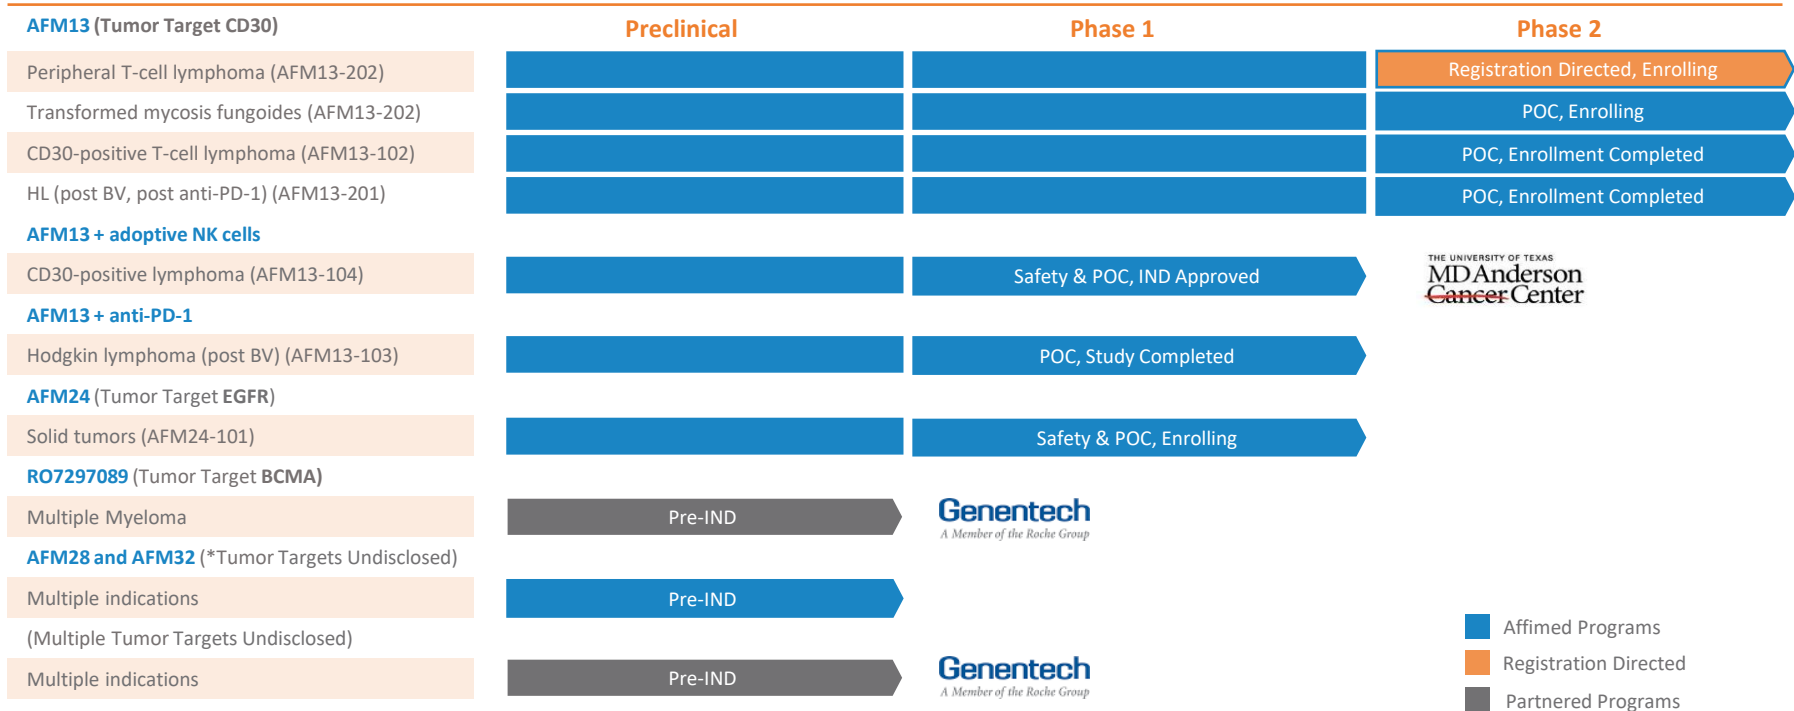

Strong background in commercialization and global marketing including launch of new products

**Angus Smith**  
CFO (starting July 13)

Broad biopharmaceutical industry experience including financial strategy, capital markets, business development and operations

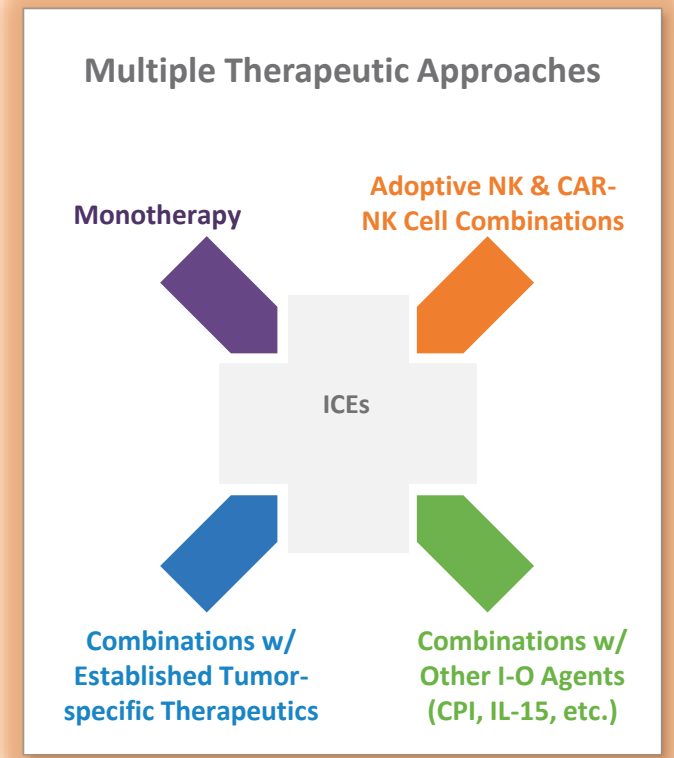

# Our Pipeline: Versatile Innate Cell Engagers (ICEs) Targeting Hematologic and Solid Tumors

- Affimed Programs
- Registration Directed
- Partnered Programs

\* Hematologic and solid tumor targets

# Affimed's ICEs Activate the Innate Immune System and Trigger a Concerted Anti-Tumoral Immune Response

# Innate Cell Engager for CD30+ Lymphomas

Treatment with AFM13

# Patients with CD30+ Lymphomas Need More Treatment Options

Registration Directed, Enrolling

## Market Potential (US, Annual)

Peripheral T-cell Lymphoma	PTCL ~2,700 eligible patients	<ul style="list-style-type: none"><li>Lack of standard of care in R/R – high unmet need – accelerated approval path given lack of options for patients</li></ul>
Cutaneous T-cell Lymphoma	TMF ~200 eligible patients	<ul style="list-style-type: none"><li>FDA acknowledged high unmet need in TMF; potential for <b>small trial</b> and <b>accelerated</b> timelines</li></ul>
Hodgkin Lymphoma	HL ~3,000 eligible patients	<ul style="list-style-type: none"><li><b>Emerging vacuum</b> of effective options in R/R as current therapies (e.g. anti-PD1 and BV) move to earlier lines of treatment</li></ul>
Diffuse Large B-cell Lymphoma	DLBCL ~1,300 eligible patients	<ul style="list-style-type: none"><li><b>Precision medicine opportunity</b> in CD30-positive subset currently not targeted</li></ul>

**Adcetris WW annual revenue exceeded \$1B in 2019 despite limitations**

- Approved in sALCL and other CD30-expressing PTCL
- Recently approved for front-line HL
- Unfavorable toxicity profile limits long-term use

# AFM13: Holds Promise as Monotherapy and in Combinations

Registration Directed, Enrolling

Safety & POC, IND Approved

- AFM13 to address clinical unmet needs in CD30+ lymphomas
- Unmet need in CD30+ lymphomas represents >\$1B market potential

Fast to Market

Expand

## T-cell Lymphoma

R/R PTCL and CTCL

R/R PTCL and TMF

1L PTCL

AFM13-102: monotherapy

AFM13-202 (REDIRECT): monotherapy

Ph 3:  
Confirmatory study

## CD30+ Lymphoma

R/R CD30+ lymphoma

AFM13-104: AFM13 + cbNK cells (MDACC)

Ph 2/3:  
AFM13+aNK

## Hodgkin Lymphoma

R/R Post-BV/PD1-naïve

AFM13-103: AFM13+Pembro

Ph 3: AFM13+anti-PD-1

# AFM13: Delivering Meaningful Benefit to Patients with CD30+ Lymphomas

## Monotherapy

**AFM13: First-in-class** innate cell engager targeting patients with CD30+ lymphomas

- **Showed single agent anti-tumor responses in TCL (ORR=50%) and HL**

## Combinations w/ Other I-O Agents

Shows promising signs of broad clinical development potential in augmenting other I-O therapies, such as PD-1 inhibitors\*

- **P1b data: 88% ORR, 42%/46% CR rate (local/central read); N=24**

## Adoptive NK & CAR-NK Cell Combinations

Combination with adoptive transfer of innate immune cells could enhance immune response\*

- **Preclinical data show promising signs of potential efficacy**
- **IND cleared for Ph 1 NK cell therapy combo**

\*Based on AFM13 preclinical and clinical studies.

# Innate Cell Engagers in Solid Tumors

Treatment with AFM24

# AFM24 (EGFR/CD16A): Potential to Disrupt Treatment Paradigm

By overcoming resistance to current targeted treatments for EGFR-positive malignancies

AFM24 activates NK cells and macrophages in the microenvironment of EGFR expressing tumors and mediates tumor cell killing independent of alterations in the EGFR pathways

## Based on preclinical data:

### ✓ Differentiated antibody profile

- Harnesses the innate immune system through new MOA to induce potent tumor killing via ADCC and ADCP
- A broad set of patients with hard-to-treat EGFR-expressing cancers may benefit

### ✓ Potent tumor killing regardless of mutation & density

- Strong cytotoxic activity against EGFR-expressing tumor cell lines regardless of mutation (including wild type, KRAS or BRAF mutated)
- Effective in cells with high or low EGFR density

### ✓ Positive toxicity profile

- No toxicities observed in 2 independent cynomolgus toxicity studies

# AFM24 (EGFR/CD16A) Has Broad Applicability and Combination Potential

## Broad Development Opportunities

### ➔ IO and Cell Therapy Combinations

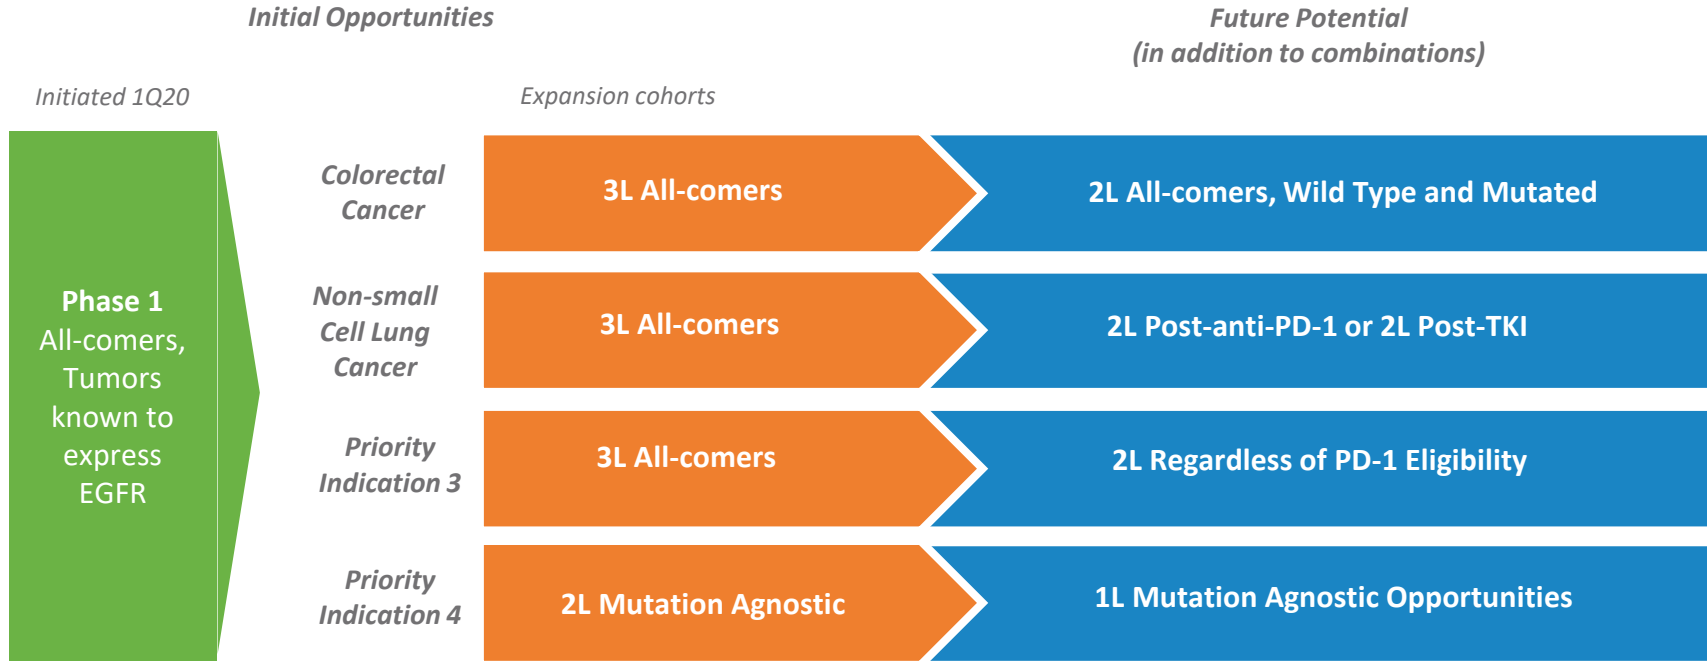

Checkpoint inhibitors, activators of innate immunity, adoptive cell therapy, etc.

### ➔ Mutation-agnostic

### ➔ Earlier Lines of Therapy

Through combinations and monotherapy depending on tumor setting

# A Multipronged Clinical Development Strategy Designed to Deliver AFM24 to Those Patients with Few Options

# Innate Cell Engagers in Myeloma

Treatment with RO7297089 (formerly AFM26)

# Preclinical Pharmacology and Safety of RO7297089, a Novel Anti-BCMA/CD16A Bispecific Antibody for the Treatment of Multiple Myeloma

## 1<sup>st</sup> publication featuring AFMD/GNE collaboration with joint authorship on R07297089 (formerly AFM26)

- The ROCK<sup>®</sup> platform continues to demonstrate the ability to induce efficacious target cell lysis also in the presence of low expression of the tumor antigen
- High affinity bivalent engagement of CD16A positive innate immune cells is a promising approach to target BCMA positive tumor cells in MM

### ✓ Potent killing of BCMA positive tumor cells and low risk of cytokine release syndrome

- R07297089 shows potent cell killing of BCMA positive tumor cell lines employing NK cells and macrophages as effector cells; minimal increases in cytokines

### ✓ Favorable safety profile in 4-week cyno safety study

- A 4-week safety study in cynomolgus monkeys showed a favourable safety profile with no cytokine release or adverse findings observed in both dose levels (15 and 50 mg/kg)

### ✓ Selective killing of BCMA pos cells

- Time- and dose-dependent reductions in serum IgM levels and plasma cell markers (BCMA and J-chain mRNA) were observed suggesting selective killing of BCMA positive cells by engaging CD16A positive immune cells

# Pipeline Expansion

AFM28, AFM32 and partnered programs

## Partnering New ICEs

## Rational Combinations

- Adoptive NK cells
- Checkpoint inhibitors (anti-PD-1 and beyond)
- Targeted cytokines
- Other innate and adaptive MOAs synergistic to innate cell engagement

- **AFM28** and **AFM32** – wholly owned by Affimed
- **New ICEs**
  - Can target a **broad range of TAAs** generated internally or sourced from partners
  - Antibody formats can be customized based on the **modular ROCK® platform**

# Leading Innate Immune Cell Activation to Treat Cancer Patients

Multiple Potential Inflection Points in 2020 and 2021

## Strong Leadership and Cash Position

- ✓ Recent CFO, CSO and CMO appointments strengthen depth and breadth of industry experience
- ✓ Funded at least into the First Half of 2022

### AFM13

- Interim data in PTCL as mono
- Initiation of combination study with NK cell product at MDACC and progression updates

### AFM24

- Dose escalation safety and activity data
- Initiation of dose cohort expansion as mono and in combinations

### AFM28 & AFM32

- Initiation of IND-enabling studies of AFM28 and AFM32
- IND-filing of AFM28

### Genentech

- Update on RO7297089 progression and on additional programs
- Pending program progression, potential for milestone payment

**Thank you**
